

Evorel: UK Stock Update

Since acquiring the Evorel family of products in October 2019, we have been committed to bringing the products back to patients as quickly as possible.

We have restarted the manufacturing process, fast-tracked supply, shortened timelines and are pleased to be able to say that we have brought both the Evorel 50 and Conti lines back to market six months ahead of what had originally been communicated.

Please note below the most up to date stock availability dates for all Evorel products:

Evorel 50	Available
Evorel Conti	Available
Evorel 25	10th April 2020
Evorel 75	17th April 2020 (limited supply)
Evorel 100	17th April 2020 (limited supply)
Evorel Sequi	May 2020

We appreciate your patience and understanding as we focus our attention on building a stable supply chain. In addition, we thank GPs across the UK for continuing to prescribe responsibly as we replenish the market and build a solid inventory of product.

We will of course continue to provide regular updates via our website and to the UK Health Authorities.

Further information

Patients who have any questions with regards to their treatment options should speak to their GP.

For pharmacists and healthcare professionals who wish to place orders for the Evorel range of products, please contact Alliance Healthcare via your usual channels.
